Brianna Hinds

(210)-288-7673 | briden32016@gmail.com | linkedin.com/in/brianna-hinds | github.com/briannaghinds | briannaghinds.dev

Summary

Highly motivated computer science student with 5 years of programming experience and a passion for artificial intelligence, machine learning, and data analytics. Eager to apply academic knowledge, problem solving skills, and practical experience to contribute to innovative projects and grow as a developer. Also, a dedicated D1 track and field athlete, demonstrating adaptiveness, discipline, determination, and teamwork.

Education

Houston Christian University Houston, TX
Bachelors of Science in Computer Science, Minor in Data Analytics *August 2022 – Present*

- **Extracurriculars**: Part of the HCU Track Team, President of Robotics and Engineering Organization
- **Relevant Coursework**: Data Analytics, Operating Systems, Data Structures, Database Management Systems

Professional Work Experience

Functional Analyst Intern June 2025 – Present
Sysco *Houston, TX*

- Improved Sysco's data process time by 80% by developing a vector based product matching algorithm to automate item mapping between external vendor data and Sysco's master product dataset.
- Validated the model against manually matched datasets, achieving 100% accuracy.
- Built and evaluated my solution in Amazon SageMaker using Python (sentence-transformers, scikit-learn, pandas) and SQL via DBeaver in data environments.

Data Science Researcher August 2024 – Present
Purdue University *West Lafayette, IN, Remote*

- Collaborating with Houston Fire Department on analyzing their station data to improve HFD performance.
- Developing data-driven strategies to optimize resource allocation and response times.
- Applying Python and R, I am implementing data science cleaning, processing, and visualization tools to present the results of the analysis.

Machine Learning Research Assistant May 2024 – Present
Houston Christian University *Houston, TX*

- Built a Graph Convolution Networks (GCN) to aid in the prediction of cancers types based on gene expressions. Visualizations such as tSNE were implemented to show the relationship of the data.
- Fine tuned a GCN using Bayesian Optimization to find a classification model architecture of 96% accuracy.
- Applying Python and R, I am implementing data cleaning, processing, and visualization tools to present the results of the analysis.

Projects

NASAMINDS: AI Inventory Tracking | *Python, PyTorch, Matplotlib* January 2024 – March 2024

- Built, trained, and tested an Artificial Neural Network to localize an object on an x-y plane based on RFID data (signals and frequency).
- Model concluded with very low error and our mapping visualization showed the ANN model's accuracy for predicting where an item was.

Sky-5O | *Python, Open Computer Vision, Tello Drone* March 2023 – May 2023

- Developed a license plate detection system that implemented a GUI to control the drone with a connected computer keyboard.
- User can operate takeoff, landing, and the drone's camera; where it can take a picture and record the license plate in a text file.

Technical Skills

Languages: Python, SQL, R, Java, Arduino/C++, HTML, CSS, JavaScript, C
Frameworks/Technologies: Object-Oriented Programming, Machine Learning Models, Neural Networks, PyTorch
Skills: Time Management, Communication, Teamwork, Leadership, Microsoft Excel, Data Cleansing, Git, GitHub
